Abstract (Basic): WO 200319905 A1

NOVELTY - Mobile phone user can make purchases or obtain information via the Internet, using both voice and nonverbal methods. Users can submit voice queries and receive nonverbal replies, submit nonverbal queries and receive voice replies, or perform similar operations that marry the voice and data capabilities of modern mobile communication devices. The user may provide notification criteria indicating under what conditions a notification should be sent to the user's wireless device. When purchasing opportunities matching the selected notification criteria become available, the user is notified.

DETAILED DESCRIPTION - INDEPENDENT CLAIM included for the following:

(a) system

USE - For wireless devices such as mobile phones.

ADVANTAGE - Makes obtaining information or purchases from the Internet more convenient and easier than using conventional wireless Internet access methods. Merchants, suppliers and vendors can more effectively market distressed, time sensitive, and location sensitive or general inventories of goods or services. Suppliers can more easily communicate with potential customers in a manner preferred by the customer, thereby increasing customer responsiveness.

DESCRIPTION OF DRAWING(S) - The diagram shows the types of communication paths between a mobile subscriber and a server

web server (150)

mobile subscriber (110)

data transformation services (240)

Abstract (Basic): WO 200207117 A2

NOVELTY - A transaction request is received at a transaction management system (402) from a wireless communication device (408) and the request is then communicated to a transaction fulfillment system (404). A first transaction bar-code is transmitted to the communication device, the bar-code is scanned to generate a first fulfillment verification operation, before a second bar-code is communicated from the fulfillment system to the communication device in order to perform a second fulfillment verification.

DETAILED DESCRIPTION - AN INDEPENDENT CLAIM is included for a method for facilitating a wireless transaction.

USE - Facilitating wireless electronic commerce transactions.

ADVANTAGE - Providing secure and convenient facilitating of transactions.

DESCRIPTION OF DRAWING(S) - The drawing shows the system Communication device (408)

Transaction management system (402)

Transaction fulfillment system (404)

Abstract (Basic): WO 200207046 A2

NOVELTY - A wireless communication device (308) has a scrolling device (308e) used to select a desired transaction code name (308g) from a list (308h) of names on a visual display (308d), while an optically scannable transaction code (308i) is displayed in response to a selection. After the identity of the requester has been verified, a transaction code is transmitted to the device and is scanned by the transaction fulfillment system.

DETAILED DESCRIPTION - AN INDEPENDENT CLAIM is included for a system for facilitating wireless electronic transactions.

USE - Facilitating wireless electronic commerce transactions.

ADVANTAGE - Providing secure and convenient facilitation of transactions.

DESCRIPTION OF DRAWING(S) - The drawing shows the device

Abstract (Basic): WO 200206992 A2

NOVELTY - The method involves receiving, by a transaction management system, a transaction request from a transaction requester. An identity of the transaction requester is then verified and a first transaction code is communicated to a wireless communication device.

DETAILED DESCRIPTION - The second transaction barcode (STB) is transmitted from the transaction management system (TMS) (302) to the wireless communication device (WCD) (308). A first fulfillment event is also performed in response to a first transaction barcode (FTB) being verified. An operation of scanning the STB is performed after the operation H. In response to scanning the STB, an operation J of receiving, at the TMS (302), a decoded representation of the STB from a transaction fulfillment system (TFS) (304) is performed. After receiving the decoded representation of the STB and in response to the STB being verified, an operation of communicating a transaction fulfillment message (TFM) from the TMS (302) to the WCD (308) is performed.

An INDEPENDENT CLAIM is included for:

(a) a system for facilitating a wireless transaction

USE - In mobile electronic commerce for facilitation of wireless e-commerce transactions.

ADVANTAGE - Enables wireless e-commerce transactions to be facilitated and fulfilled in a secure and convenient manner.

DESCRIPTION OF DRAWING(S) - The drawing illustrates an embodiment of operations for carrying out a wireless transaction according to the

present invention.

English Abstract

A user of a wireless device, such as a mobile phone, can make purchases or obtain information via a network, such as the Internet, using both voice and non-verbal methods. Users can submit voice queries and receive non-verbal replies, submit non-verbal queries and receive voice replies, or perform similar operations that marry the voice and data capabilities of modern mobile communication devices. The user may provide notification criteria indicating under what conditions a notification should be sent to the user's wireless device. When purchasing opportunities matching the selected notification criteria become available, the user is notified. The user can respond to the notification, and immediately take advantage of the purchasing opportunity if he so desires. Mixed-mode interactions

can also be used by sellers to more advantageously control the marketing of distressed, time sensitive, or other merchandise/services.

French Abstract

La presente invention permet a l'utilisateur d'un dispositif mobile, tel qu'un telephone mobile, d'effectuer des achats ou d'obtenir des informations via un reseau tel que l'Internet en utilisant a la fois des procedes vocaux et non verbaux. Selon l'invention, les utilisateurs peuvent soumettre des demandes vocales et recevoir des reponses non verbales, soumettre des demandes non verbales et recevoir des reponses vocales, ou effectuer des operations similaires dans lesquelles sont combinees les fonctionnalites vocales et de transmission de donnees des dispositifs de communication mobiles modernes. L'utilisateur peut introduire des criteres de notification indiquant dans quelles conditions une notification doit etre envoyee a son dispositif sans fil. Lorsque des possibilites d'achat correspondant aux criteres de notification choisis sont disponibles, l'utilisateur recoit une notification. L'utilisateur peut repondre a la notification et profiter immediatement de la possibilite d'achat si il le souhaite. Les interactions en mode mixte peuvent egalement etre utilisees par les vendeurs afin de maitriser de facon avantageuse la commercialisation de services ou marchandises d'urgence, a delai de livraison critique ou autres.

Abstract (Basic): WO 2003100693 A1

NOVELTY - The system has a local transaction server (120) that associates with a point of sale device to store a purchase price and an identifier for a transaction. A central transaction server (108) receives a voice call from a mobile communication subscriber. The server verifies the transaction using payment account information, and a purchase price and identifier received from the subscriber and local server.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for a method for performing sales transaction using a **mobile** communication device .

USE - Used for performing a sales transaction for a good or a service.

ADVANTAGE - The central transaction server receives the voice call from the subscriber to locate a pending transaction in a database managed by the local transaction server, and hence completes the transaction without requiring text messaging or paging services.

DESCRIPTION OF DRAWING(S) - The drawing shows a sales transaction

system.

Mobile telecommunication network (102)

GB 2371123	A	19	G06F-017/60	

Abstract (Basic): GB 2371123 A

NOVELTY - Details of a customer, his relatives with their profile and available goods/services are stored in a database. A message containing important date ahead together with relevant goods is transmitted to the customer. Order details fed by the customer for selected goods are sent to a server on proper authorization, based on which payment details are provided to the customer. Goods are delivered to the customer on successful payment.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

- (1) Gift selection and purchase apparatus; and
- (2) Computer program product storing gift selection and purchase program.

USE - For selecting and purchasing gifts e.g. CDs, flower bouquets, etc., for relatives, friends using **wireless device** such as **mobile phones , PDA .**

ADVANTAGE - Ensures easy purchase by matching suitably available goods with relevant personality traits and sends corresponding message to the customer. Ensures secure purchase of gifts by using firewall protection. Reduces shopping time by planning organizing relatives birthdays and anniversaries.

DESCRIPTION OF DRAWING(S) - The figure explains schematic steps involved in gift selection and purchase process.

English Abstract

A method is described that comprises providing a cultural specific on-line commerce experience for an end user by translating an action of the end user into a standard format used by an on-line auctioneer and by causing the translated action to be sent over a network. The action is taken through a cultural specific end user interface. The standard format is used by an on-line commerce service's back end application software to recognize end user actions originating from experiences that include the cultural specific on-line experience as well as experiences other than the cultural specific on-line experience. The action that is translated into the standard format is to be sent into a network so that it can be received by the on-line commerce service's back-end resources and recognized by the back-end application software.

French Abstract

La presente invention concerne un procede comprenant la fourniture d'un experience de commerce electronique specifique de la culture a un usager par traduction d'une action de l'usager en un format standard utilise par un commissaire-priseur, et en faisant que l'action traduite soit envoyee via un reseau. Cette action se realise via une interface d'usager specifique de la culture. Le format standard est utilise par un applicatif dorsal de service de commerce electronique pour reconnaitre

les actions de l'utilisateur prenant naissance dans des expériences qui incluent l'expérience en ligne spécifique de la culture ainsi que des autres expériences autres que d'expériences en ligne spécifique de la culture. L'action qui est traduite dans le format standard doit être envoyée dans un réseau de façon qu'elle puisse être reçue par les ressources dorsales du service de commerce électronique et reconnue par l'applicatif dorsal.

Detailed Description

Claims

Fulltext Word Count: 6666

English Abstract

Methods and systems for performing sales transactions using a **mobile**

communications **device** and without requiring text messaging or paging services are disclosed. In one example, a subscriber desiring to purchase goods or services proceeds to a point of sale device (125) where the purchase price for the goods or services is totaled. The subscriber then initiates a voice call with a central transaction server (108). The subscriber provides a point of sale device identifier and the purchase price to the central transaction server (108). The central transaction server (108) contacts a local transaction server (120) using the identifier provided by the subscriber. The central transaction server (108) also prompts the subscriber to select the payment account for the transaction and verifies that the subscriber has sufficient credit to purchase the goods or services. The central transaction server (108) locates a pending transaction entry in a database (122) local to the point of sale using the device identifier provided by the subscriber. Upon locating the pending transaction entry and verifying that the subscriber has sufficient credit, the central transaction server (108) notifies the subscriber and the point of sale device (125) that the transaction is complete.

French Abstract

L'invention concerne des procedes et des systemes destines a realiser des transactions de ventes au moyen d'un dispositif mobile de communications sans necessiter des services de messagerie textuelle ou de teleavertisseur. Dans un exemple, un abonne souhaitant acheter des marchandises ou des services accede a un dispositif de point de vente (125) ou les prix d'achat des marchandises ou des services sont totalises. L'abonne debute alors un appel vocal avec un serveur central de transaction (108). L'abonne fournit un identificateur de dispositif de point de vente et le prix d'achat au serveur central de transaction (108). Le serveur central de transaction (108) contacte un serveur local de transaction (120) grace a l'identificateur fourni par l'abonne. Le serveur central de transaction (108) demande aussi a l'abonne de selectionner le compte de paiement pour la transaction et verifie que l'abonne possede un credit suffisant pour acheter les marchandises ou les services. Le serveur central de transaction (108) place une entree de transaction en cours dans une base locale de donnees (122) du point de vente au moyen de l'identificateur de dispositif fourni par l'abonne. Lors de la localisation de l'entree de la transaction en cours et de la verification que l'abonne possede un credit suffisant, le serveur central de transaction (108) avertit l'abonne et le dispositif de point de vente (125) que la transaction est realisee.

English Abstract

French Abstract

Cette invention se rapporte a un analyseur de prêts portable, dans lequel, d'une maniere generale, les informations relatives a un emprunteur potentiel et a un prêt peuvent etre entrees. L'analyseur transfere les donnees ainsi entrees dans un rapport d'analyse de transaction, qu'un agent de vente peut examiner. L'analyseur attribue egalement une valeur en points au prêt potentiel. La valeur en points ainsi attribuee peut ensuite etre comparee a des fourchettes de valeurs en points predeterminees, pour determiner si le prêt potentiel est viable.

KR 2002065989	A	1	G06F-017/60	

Abstract (Basic): KR 2002065989 A

NOVELTY - A payment method is provided to make a payment on a mobile terminal by using an identifiable payment code downloaded at a mobile terminal via an online network or an offline media or given at every transaction.

DETAILED DESCRIPTION - The method comprises steps of a user requesting a payment on a mobile phone(S101), a **mobile payment** management company setting a monthly payment limit to the user by considering a vocation, an age or an income, and transmitting a payment code to the user(S102), the user downloading the payment code at the mobile phone(S103), in a case of buying a commodity or using a service by using a **mobile payment**, the user inputting a secret code at the mobile terminal for receiving a user approval(S104), the mobile phone displaying the payment code on a display(S105), a payment code **reader**, installed at an affiliated **store**, **reading** the payment code displayed on the mobile phone(S106), the payment code **reader** allowing an operator to input a transaction money or an installment month as well as the payment code, and transmitting a transaction approval request to the **mobile payment** management company(S107), the company transmitting a **transaction approval code** and specification to the **reader** and the **mobile phone** after checking if the requested transaction is normal(S110), and a mobile communication company calculating a total payment amount and **sending** a bill to the user(S111).

Abstract (Basic): WO 200207117 A2

NOVELTY - A transaction request is received at a transaction management system (402) from a wireless communication device (408) and the request is then communicated to a transaction fulfillment system (404). A first **transaction bar - code** is **transmitted** to the communication device, the **bar - code** is **scanned** to generate a first fulfillment verification operation, before a second **bar - code** is **communicated** from the **fulfillment system** to the communication

device in order to perform a second fulfillment verification.

DETAILED DESCRIPTION - AN INDEPENDENT CLAIM is included for a method for facilitating a wireless transaction.

USE - Facilitating **wireless electronic commerce** transactions.

ADVANTAGE - Providing secure and convenient facilitating of transactions.

DESCRIPTION OF DRAWING(S) - The drawing shows the system

Communication device (408)

Transaction management system (402)

Transaction fulfillment system (404)

Abstract (Basic): WO 200207046 A2

NOVELTY - A wireless communication device (308) has a scrolling device (308e) used to select a desired transaction code name (308g) from a list (308h) of names on a visual display (308d), while an optically scannable transaction code (308i) is displayed in response to a selection. After the identity of the requester has been verified, a transaction code is **transmitted** to the device and is scanned by the transaction **fulfillment system**.

DETAILED DESCRIPTION - AN INDEPENDENT CLAIM is included for a system for facilitating wireless electronic transactions.

USE - Facilitating **wireless** electronic **commerce** transactions.

ADVANTAGE - Providing secure and convenient facilitation of transactions.

DESCRIPTION OF DRAWING(S) - The drawing shows the device

Scrolling device (308e)

Code name (308g)

Display (308d)

Transaction code (308i)

pp; 46 DwgNo 5/10

Abstract (Basic): WO 200206992 A2

NOVELTY - The method involves receiving, by a transaction management system, a transaction request from a transaction requester. An identity of the transaction requester is then verified and a first transaction code is communicated to a **wireless** communication **device**.

DETAILED DESCRIPTION - The second transaction barcode (STB) is transmitted from the transaction management system (TMS) (302) to the **wireless** communication **device** (WCD) (308). A first fulfillment event is also performed in response to a first transaction **barcode** (FTB) being verified. An operation of scanning the STB is performed after the operation H. In response to scanning the STB, an operation J of receiving, at the TMS (302), a decoded representation of the STB from a transaction **fulfillment system** (TFS) (304) is performed. After receiving the decoded representation of the STB and in response to the

STB being verified, an operation of **communicating** a transaction fulfillment message (TFM) from the TMS (302) to the WCD (308) is performed.

An INDEPENDENT CLAIM is included for:

(a) a system for facilitating a wireless transaction

USE - In **mobile** electronic **commerce** for facilitation of **wireless e - commerce** transactions.

ADVANTAGE - Enables **wireless e - commerce** transactions to be facilitated and fulfilled in a secure and convenient manner.

DESCRIPTION OF DRAWING(S) - The drawing illustrates an embodiment of operations for carrying out a wireless transaction according to the present invention.

Title: Calvin Klein's warehouse is designed for success

Author(s): Beale, S.

Journal: ID Systems European Edition vol.6, no.3 p.14-16

Publisher: Helmers Publishing,

Publication Date: March 1998 Country of Publication: USA

CODEN: ISEEEE ISSN: 1081-275X

SICI: 1081-275X(199803)6:3L:14:CKWD;1-G

Material Identity Number: B070-98003

Language: English Document Type: Journal Paper (JP)

Treatment: Practical (P)

Abstract: At Calvin Klein's Italian warehouse, RFDC moves 10 million items a year. Finished goods arrive folded in large cartons and are unloaded in the clearing/sorting area where workers manually check in the goods received, using paper packing lists that arrive with each shipment. Goods are then passed on to quality control where they are inspected for defects. From quality control, goods are key entered into a PC workstation running the warehouse management system. Software, supplied by Calvin Klein's logistic supplier, TecnoLogistica, uses an Oracle database, held on a PC network running under Windows NT. As each item is registered, the TecnoLogistica system **sends** a print command to Intermec 3400 thermal **transfer** printers, linked to the PC via RS-232 port. The 3400s generate EAN 128 **bar codes** that encode the type of garment, size, and color, and include a check digit unique to Calvin Klein-in an average year, the facility will print some six million individual **bar codes**. Operators manually apply the label to the garment and then **scan** it with **portable** Janus 2020 **terminals** with integrated laser **scanners**. (0 Refs)

Language: English Document Type: Conference Paper (PA)

Treatment: Applications (A); Practical (P)

Abstract: The rapid deployment of wireless access technology, along with the emergence of high speed integrated service networks, promises to provide users with ubiquitous access to multimedia information in the near future. We are building an experimental testbed system, SWAN (Seamless Wireless ATM Network), to mimic this emerging networking environment. Our wireless access network is organized according to a nanocellular design with base stations serving as a gateway for communication between the wired network and the mobile hosts in a cell. Normally, a mobile host **sends** and receives traffic through the base station in its current cell. But SWAN also supports direct ephemeral networking between a limited number of cooperating mobile hosts within a small domain. The heart of the testbed is a networking subsystem, FAWN (Flexible Adapter for Wireless Networking) that interfaces the standard PCMCIA bus to an RF modem. The FAWN interface is used with a PC or workstation connected to a wired backbone network or a **portable device** such as a laptop or palmtop computer. In addition, a user interface consisting of an LCD display, audio I/O, and a **bar code reader** has been built. When interfaced with FAWN this results in a **portable wireless multimedia terminal**. (11 Refs)

Subfile: B C

Descriptors: asynchronous **transfer** mode; cellular radio; computer networks; mobile radio; modems; multimedia communication; subscriber loops; telecommunication terminals; test facilities; user interfaces

Identifiers: mobile networked computing; user interface; wireless access technology; high speed integrated service networks; multimedia information; experimental testbed system; SWAN; Seamless Wireless ATM Network; networking environment; nanocellular design; base stations; gateway; wired network; mobile hosts; networking subsystem; LCD display; Flexible Adapter for Wireless Networking; PCMCIA bus; RF modem; FAWN interface; workstation; **portable wireless multimedia terminal**; wired backbone network; **barcode reader**

Abstract: The grocery wholesaler Londis was struggling to meet the needs of its owners, the 1500 independent food retailers who are also its

customers. Londis devised an IT solution to overcome its problems. Following pilot trials, a versatile EPoS system was refined and made available to retailers. But there were benefits beyond those recognized for retail EPoS. The system developed was able to interwork with Londis warehouse computers, enabling retailers to place orders electronically and maintain a product portfolio. For small stores, the company commissioned an interesting hybrid order system. The retailer uses a **hand - held terminal** and a regularly printed catalogue of merchandise with **barcodes**. The required goods are selected by **wand**, then the terminal **transmits** the order to the wholesaler over an ordinary telephone line. Londis has also introduced an EDI system. (0 Refs)

Title: Set phasers on stun, Mr. Spock: taking aim at the control implications of wireless networks

Author(s): Howells, M.

Author Affiliation: Nordstrom Inc., Seattle, WA, USA

Journal: EDPACS vol.20, no.12 p.1-13

Publication Date: June 1993 Country of Publication: USA

CODEN: EDPCDF ISSN: 0736-6981

Language: English Document Type: Journal Paper (JP)

Treatment: Applications (A); Practical (P)

Abstract: This article explores the control implications of one example of the introduction of new technology to an organization-the use of **hand - held laser terminals** as input devices on a radio frequency network. To support this business need, Nordstrom began developing an enhanced inventory management system. Central to the new system is the ticketing of each piece of merchandise with a **bar - coded** price tag that indicates the item's price and description. This information is **scanned** as input into the system at the point-of-sale register. The inventory management component that collects data-and is the focus of this article-is the merchandise **transfer** system. The two major activities of this system are: recording the receipts of merchandise from vendors at the stores; and tracking merchandise as it is **transferred** between the stores. (0 Refs)

Title: A revolution in distribution (bar - code readers and radio transmitters)

Author(s): Parker, J.

Journal: InformationWEEK no.339 p.36, 40

Publication Date: 23 Sept. 1991 **Country of Publication:** USA

CODEN: INFWE4 **ISSN:** 8750-6874

Language: English **Document Type:** Journal Paper (JP)

Treatment: General, Review (G)

Abstract: **Bar - code readers** and radio **transmitters** aided by the use of the radio waveband, are creating a revolution in distribution and inventory control. Manufacturers and retailers are turning to wireless local area networks that utilize radio frequency-based data collection to speed delivery, track production, and improve inventory control. One such retailer is K mart Corporation which originally installed radio frequency (RF) technology in 1984 as part of its first point-of-sale **scanning** systems, and has more recently expanded those systems to include inventory and ordering applications. Essentially, that means taking a hand-held laser **scanner** and attached **hand - held terminal** to the display rack, **scanning** the items on the rack, reviewing the retrieved information on the terminal's screen, and then punching in the appropriate merchandise order. **Transmitters** carry the signal to the store network's file server via an intrastore cellular radio network. Each store's network is in turn linked by satellite to warehouse computer systems. Microsoft Corporation operates a similar system which is briefly discussed. Frequency allocation for such systems is also discussed. (0 Refs)

Language: English Document Type: Journal Paper (JP)

Treatment: General, Review (G); Practical (P)

Abstract: Equipped with a new **bar code** labelling system, the US Department of Agriculture's National Finance Center (NFC) in New Orleans has trimmed inventory costs by two-thirds while improving the accuracy of its yearly capital goods inventory. The Legitronic System (terminal and printer), from Weber Marking Systems, Arlington Heights, IL, is linked to an IBM mainframe using a 9600 baud modem. Weber connected the **bar code** labelling device to the mainframe with the help of the NFC. The system's main task is generating 1" *3" property identification labels. Each label contains a **bar code** (Code 39, a government standard) and three lines of data written in English. On one of these lines is a 12-digit number that the NFC uses to identify capital goods files, which are stored in the computer. When it is time to inventory capital goods, employees at the numerous agency locations 'read' the **bar code** labels with fibre optic **hand - held wand / terminals**. The information is **transferred** to the NFC computer in New Orleans where it is compared to the master inventory file. After the comparison, the computer generates a hard copy 'exception' report. Language: English Document Type: Journal Paper (JP)

Treatment: Practical (P)

Abstract: Large distributed data-processing systems are increasingly being enhanced by **hand - held terminals** dedicated to collecting data for such jobs as **reading** utility meters, controlling inventory, or **scanning bar codes**. Several attributes make the terminals ideal for remote applications, including programmability, onboard intelligence, and communication with a host computer over phone lines. The author describes a **hand - held terminal** by which collecting data and then **transmitting** it to a host over telecommunication lines, a completely electronic data route is established that speeds data entry and helps promote a more accurate exchange of information. RFDC: more capability and options than ever

Schwind, Gene F;

Material Handling Engineering v. 51 (Mar. '96) p. 101-2+

DOCUMENT TYPE: Feature Article ISSN: 0025-5262 LANGUAGE: English

RECORD STATUS: Corrected or revised record

ABSTRACT: Radio frequency data communication (RFDC) technology has expanded its capabilities and options. RFDC is the main technology for any mobile computing data input/output and facility management where **portable devices** are involved. Almost any device that can **transmit** data over a wire network can now **transmit** by radio signals. The development of lower-cost RFDC and more effective interfacing equipment means that RFDC can provide more options and functions than previously. Bar coding everything will further enhance the functionality of an RFDC system, as **bar code reading** is a common application of radio frequency technology. Neither RFDC's application nor its compliance to the various I/O terminals is at its full potential. However, it is already replacing hard wiring in security systems and may possibly be used for asset tracking.

GE Appliances Reveals Consumer Benefits of Concept Smart Appliances

US: NEW REFRIGERATOR BE GE APPLIANCES

Press Release (GE Appliances) (PRS) 06 Apr 2000 p.e

Language: ENGLISH

At the annual Kitchen and Bath Show in Chicago on 7-9 April 2000, GE

Appliances will display a web-enabled refrigerator with a detachable wireless pad. It has a **bar code scanner**, which allows users to take a food inventory, build a shopping list and even alert them to ingredients they may be allergic to. The refrigerator will also let users know if the door is left open, **communicating** by a number of methods, including **cell phone**, pager and wireless pad.

Mit Datenfunk jeder **Sendung** auf der Spur

GERMANY: SCHENKER IS A PIONEER IN DATA RADIO

Handelsblatt (HT) 28 May 1998 p.55

Language: GERMAN

German transport and forwarding group Schenker Eurocargo AG, a company of the Stinnes AG, is to furnish around 1,700 trucks with mobile on-board communication by October 1998. This will close the last gap in the tracking and tracing of freight transports. Schenker is investing DM 6mn in the electronic tracking and tracing system, which is based on **bar code** technology. Schenker claims to be the first company in Germany that will have a complete tracking and tracing system. So far these systems have been offered almost exclusively by courier services. In addition to **bar code** and **scanner** technology, Schenker also bets on communication by **mobile phone**. Schenker uses the D2 network of Mannesmann Mobilfunk for voice and data communication. The Schenker trucks will be equipped with a satellite-based tracking and tracing system, so far however not for short-haul transports.

ERICSSON DELIVERS MOBILE COMPUTER SOLUTION TO POST OFFICE

SWEDEN: ERICSSON DELIVERS COMPUTERS TO POSTEN

Pressrelease (ESK) 06 Jun. 1997 p. 1

Language: SWEDISH

Ericsson Mobile Communications AB Sweden has been awarded a contract from Posten Logistik AB, the logistics service of the Swedish Post Office around

the delivery of a mobile computer system with 1500 **portable terminals communicating** via GSM and Mobitex. The terminals are equipped with **scanners**, separate printers and equipment for wireless communication to a GSM server. Customers can receive information via the Internet or telephone. Installations will begin this July and the system will be **ready** for operation in September 1997. Customers can now trace mailed items, or receive **confirmation** that items have arrived, and data on who received the items in the mail. This system is the first of its kind for the Swedish post office.

ANRITSU LAUNCHES WIRELESS LAN

JAPAN - ANRITSU LAUNCHES WIRELESS LAN

Office Equipment & Products (OEP) 0 August 1988 p23
ISSN: 0387-5245

Anritsu is launching a wireless LAN which has a range of 200m outdoors and 100m indoors. A weak-power radio communication network is used to connect remote terminals including a communication controller which will change protocols, give service area control, self monitoring and testing, and a distributed base station wireless which can accomodate up to 10 portable wireless units. The base station unit will **transmit** at 2 Mbit/s using a coaxial cable connected to the LAN. The unit can become a **mobile data terminal** as it can be fitted with a **bar - code scanner**. Anritsu aims to sell 20 systems during 1988 and over the next five years, 300 systems.

Siemens beteiligt sich am Softwarespezialisten Brokat
GERMANY: SIEMENS, BROKAT COOPERATE
Frankfurter Allgemeine Zeitung (AUI) 04 Oct 2000 p.21
Language: GERMAN

The market for **m - commerce**, i.e. online purchases via **mobile phone**, will grow significantly. In order to take advantage of this development, Siemens acquired a stake of 3% in the software specialist Brokat <which is active in the segment of electronic payment>. Before the end of 2000, the allies are planning to develop a marketable solution for the immediate payment of online purchases via **mobile phone**. Brokat will contribute its real-time technology, which combines order and payment in one transaction. The payment **confirmation** is immediately shown on the **mobile phone** display. The amount due can be debited to the account of the phone owner through a credit card company, the operator of a mobile communication network or a service provider. It is also feasible to deduct the amount immediately from a prepaid card. Siemens has the know-how in prepaid technology and is the world market leader in the segment of prepaid cards for **mobile phones**. With the help of cooperations, Siemens wants to expand the mobile solutions unit in its mobile communication division into a third standing leg. The **mobile solutions business** so far accounts for less than 10% of Siemens group's total **mobile communication business**.

The share is to be raised to one-third within the coming three years.

Autostrade migliora il bilancio e approva lo sbarco nelle tlc

ITALY: AUTOSTRADE ANNOUNCES RESULTS

Il Sole 24 Ore (ISO) 01 Apr 1998 p.

Language: ITALIAN

The Italian motorway operator Autostrade (100% owned by IRI) has increased net consolidated profits by 66.7% to L 267bn in 1997, compared to 1996. The turnover has totalled L 3,434bn (+5.5%). The gross operating margin has reached L 1,824bn (+8%) and the return-on-equity rate has increased by 2.6% to 7.8%. At the same time, Autostrade, through its subsidiary Autostrade Telecomunicazioni, has announced its intention of applying for a telecoms licence. No official **confirmations** have been given by the company regarding possible alliances in the **mobile phone business** with Itainvest and a Hong Kong-based operator. *

La UE afirma que el canon a la telefonia falsea la/

SPAIN: EU ON **MOBILE TELECOM PAYMENT**

Expansion (EXN) 9 Jan 1995 p.4

Language: SPANISH

The European Commission is to consider the conditions of the award of Spain's second mobile telecommunications licence, whereby Airtel will make a Pta 85,000mn one-off payment, were contrary to competition law and equal opportunities conventions. It is thought that the delay in the **confirmation** of the new EU commissioners has meant that as yet the Spanish government has not yet received any official communique regarding this matter. The Commission is not against such payments but against the fact that Airtel must pay it and Telefonica not.

CEO interview: Tomo Razmilovic of Symbol Technologies--scanning the horizon
Schack, Justin
Institutional Investor v34n10 PP: 32-34 Oct 2000
ISSN: 0020-3580 JRNL CODE: IL
WORD COUNT: 1494

...TEXT: its data-scanning and transmission capabilities. These opportunities revolve around the rapidly emerging field of **mobile commerce**, or **m - commerce**, says CEO Tomo Razmilovic.

Symbol is contributing its bar code technology to a company it...

...to adapt to e-commerce may not be ready to embrace Symbol's vision of **mcommerce**.

Razmilovic, who had been chief operating officer before succeeding Symbol founder Jerome Swartz as CEO...

...China, Japan, Europe, Australia or the U.S. We had talked about bar codes in **mobile commerce** internally before the Internet, but now it's really possible, with wireless phones having Internet access.

How do you envision **m - commerce** working in practice?

Wherever you are, your cellular phone or **PDA** will have a small **scanning** device so that you can **scan bar codes** from newspaper advertisements, from TV screens. You can enter the bar code on the Web, and it will take you right to the site

How pervasive could **m - commerce** become?

I don't believe it will be a niche, but I also don't...

...a very simple device and go right to the Web site on that device.

If **m - commerce** is to fulfill its potential, what else has to change?

Industries have to embrace what...

Numbers in the sky
Rockhold, John
Wireless Review v17n19 PP: S3-S4 Oct 1, 2000
ISSN: 1099-9248 JRNL CODE: WLR
WORD COUNT: 1376

ABSTRACT: Ovum believes that consumers will spend more than \$200 billion worldwide in **m - commerce** by 2005. Strategis Group analyst Cynthia Hswe believes that mobile comparison shopping will be more widely accepted than any other **m - commerce** application. AT&T Wireless and Verizon offer

mobile comparison shopping from BarPoint.com. There, a...

TEXT: Key applications are starting to emerge from the blur of **m - commerce** 's potential.

The wireless industry already has seen incredible revenues within its history. If the...

...already is here; wireless phones are no longer just for talking. With wireless Internet and **m - commerce** , the industry approaches a transformation that promises to create revenues of legendary proportions.

Ovum believes...

...by 2003. It also predicts that consumers will spend more than \$200 billion worldwide in **m - commerce** by 2005. Everyone has heard some variation of these predictions. Debate exists as to just...

...be, but when dealing with hundreds of billions of dollars, the consensus is clear that **m - commerce** will have plenty of zeros.

David Friedman, U.S. Cellular vice president of marketing, believes...

...or 2005 or 2006, it will eventually take place," he said. According to Durlacher's **Mobile Commerce** Report, **m - commerce** hype will nosedive into disappointment and reality in 2000 and 2001. By the following year, though, **m - commerce** will rise sharply from the ashes.

Look around and you can sense the anticipation of **m - commerce** . Providers are allying with portals and ASPs, creating an intricate web of partnerships.

Kathy Simpson...

...director of developer marketing, said teamwork between providers and vendors is critical for success in **m - commerce** .

"Much like there are vendors who provide a specific piece of the e-commerce solution...

...to other pieces, I think we're going to see the same thing in the **wireless (commerce)** world," she related.

Friedman concurred, noting that the way to offer **m - commerce** is through partnerships.

"There's no cellular company that I know, not even the large...

...sure thing is that there will be plenty of contenders. In the evolution of 4 **m - commerce** services, there are those that will arrive sooner rather than later; some are even closer...

...Group analyst, believes that mobile comparison shopping will be more widely accepted than any other **m - commerce** application. Hswe thinks that it will be an immediate hit because it does not require...

...will have to convince their customers that privacy and security will not be compromised for **m - commerce** applications. Those that provide practical convenience and help where it matters most, the wallet or purse, will ease consumers into the **m - commerce** water.

AT&T Wireless and Verizon offer mobile comparison shopping from

BarPoint.com. There, a...

...to purchase the item. Eventually users of BarPoint's mobile service may be able to **scan** the **UPC** with a **scanner**-enabled **wireless device**.

DealTime takes the mobile comparison-shopping concept and "puts it on steroids," according to Garret...consumers any money, mobile ticketing aims at another primary need: convenience. According to Durlacher's **m - commerce** report, ordering tickets via a mobile device is "one of the most compelling proposed services" in **m - commerce**. It notes the convenience of ordering movie, concert and theater tickets when consumers are on...

...and sports.

Whether mobile comparison shopping and mobile tickets will be the initial movers of **m - commerce**, only soothsayers really know. Both, though, provide practical uses that will target two primary concerns...

TEXT:

...its data-scanning and transmission capabilities. These opportunities revolve around the rapidly emerging field of **mobile commerce**, or **m-commerce**, says CEO Tomo Razmilovic.

Symbol is contributing its **bar code** technology to a company it is forming with mobile communications leaders Motorola and Telefonaktiebolaget LM Ericsson. Users of **wireless phones**, television set-top boxes and **personal digital assistants**, or **PDAs**, would be able to **scan** codes from newspaper or TV ads, for example, and be connected to Internet sites to...

...traditional businesses that find it hard enough to adapt to e-commerce may not be **ready** to embrace Symbol's vision of **m-commerce**.

photo omitted

Razmilovic, who had been chief operating officer before succeeding Symbol founder Jerome Swartz...

...our business. Mobile systems make up more than 60 percent. It's the combination of **bar code** technology, mobile computing and wireless connectivity that is the killer. We've always envisioned the **bar code** as a world standard for commerce and communication. It costs next to nothing to use...

...same way in China, Japan, Europe, Australia or the U.S. We had talked about **bar codes** in **mobile commerce** internally before the Internet, but now it's really possible, with **wireless phones** having Internet access.

How do you envision **m-commerce** working in practice?

Wherever you are, your cellular phone or PDA will have a small scanning device so that you can scan **bar codes** from newspaper advertisements, from TV screens. You can enter the **bar code** on the Web, and it will take you right to the site where that product can be purchased.

How pervasive could **m-commerce** become?

I don't believe it will be a niche, but I also don't...

...wireless communications.

One venture involves Blue Tooth, which is the standardized, industry-approved method for **wireless devices** to communicate with each other so that, for example, a **cell phone** can engage a computer printer to make a hard copy of a fax. The other venture will enable consumers to **scan barcodes** in advertisements found in magazines, newspapers or even on television with their **cell phones** or other devices to order products or get more information about them.

Shift in wireless industry

While these projects may seem somewhat far afield from Motorola's core **wireless phone business**, they really are closely tied to it. Like every telecommunications firm, Motorola must cope with...

...to delivering data.

Delivering data is important because it opens the door to so-called **mobile commerce**, or purchases made using cell phones and other wireless devices, which represents a potentially big new source of revenue for Motorola and other wireless technology companies. With **mobile commerce** projected to grow to more than \$56 billion within four years, Motorola is looking to...

...new way for consumers to research and buy products. Consumers might use existing tools like **cell phones** - or other devices yet to become available - to **scan the bar codes** and buy things from wherever they might be at any given moment.

Rud Istvan, Motorola...

...called

"squirters."

"You would scan a barcode with a squirter that would later find a **cell phone** or some other device it could use to squirt your information wirelessly to the company..."
